CodeMRI® Portfolio

Updated with our most requested features

Silverthread's new CodeMRI Portfolio product provides a high-level heat map of the technical health of all of your software assets. The Portfolio view provides information on which codebases need monitoring, their architecture and code quality, and the likelihood of challenges if considering a transition to the cloud.

silverthread																	
Software Portfolio		Software Asset Details			Quality Index		Software Quality			Software Economics			Cloud Readiness		Business Details		
Client: Silverthread Client		Language	Lines of Code	Number of Files	Software Quality Index	Course of Action	Code Quality	Cyclicality	Modularity	Maintainability	Agility	Risk	Cloud Blockers	# of Developers	Budget	Purchase price	3rd party

What's New:

- Aggregated metrics make tracking code health easy
- Rapidly deployable for an unlimited number of codebases
- Updated course of action suggestions for monitoring and refactoring

Feature Highlights

Quality Index and Course of Action

Pull all quality indices together into a single composite metric for each software function. Easily compare one codebase to another.

Software Quality Metrics

Break down the software quality index into detailed architecture and code quality scores to rapidly identify opportunities for improvement.

Software Economics

Easily compare and prioritize systems based on economic scores including agility, risk, and maintainability.

Cloud Readiness

Insight into predicted obstacles for moving a system to the cloud. Use this to plan for modernization and compare lift-and-shift costs versus refactoring.
